

Linking Social and Education Data to Health Data

Big Data for Health Policy Workshop
Fields Institute, Toronto
November 5-6, 2014

Karey Iron, Director Data Partnerships & Development

Current State (for the most part): Siloed data

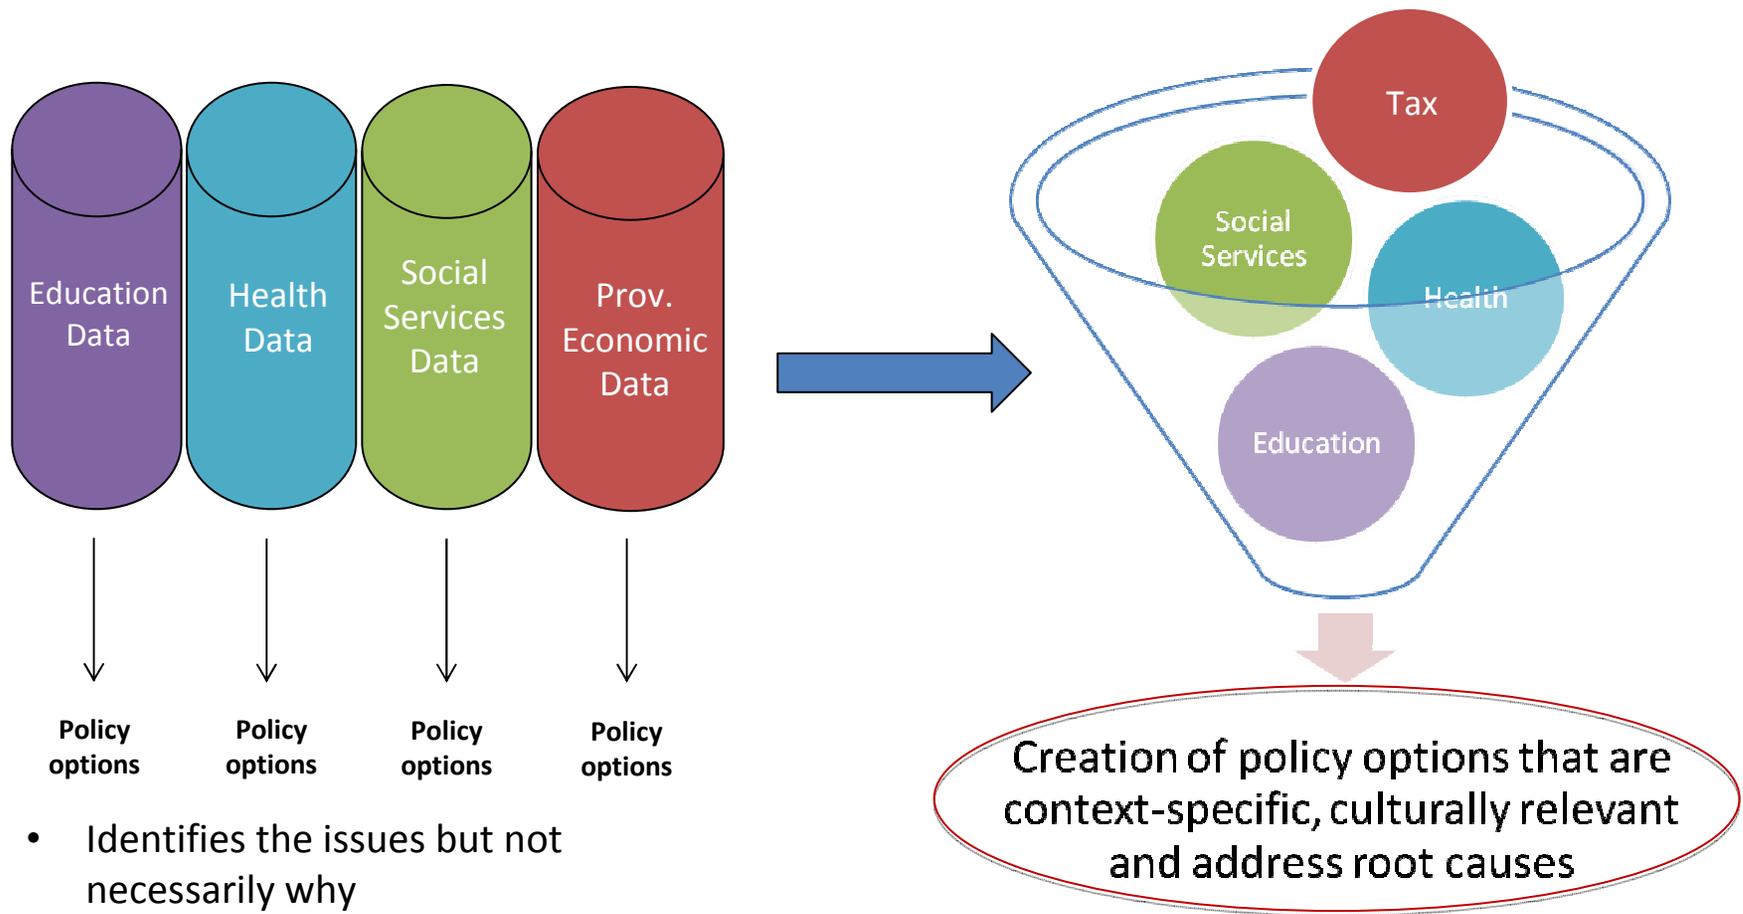

- Identifies the issues but not necessarily why
- Policy responses don't consider the impact on other sectors

Reproduced in part from Ministry of Health and Long-term Care 2014, with permission

Desired state:

An “integrated story” to identify the right policy options

- Identifies the issues but not necessarily why
- Policy responses don't consider the impact on other sectors

Reproduced in part from Ministry of Health and Long-term Care 2014, with permission

Examples of linking social, education and health data in Ontario

Atlas on the Primary Care
of Adults with Developmental
Disabilities in Ontario

December 2013

camh

Linking Ontario Works and Ontario Disability Support Program
claims to health data in Ontario

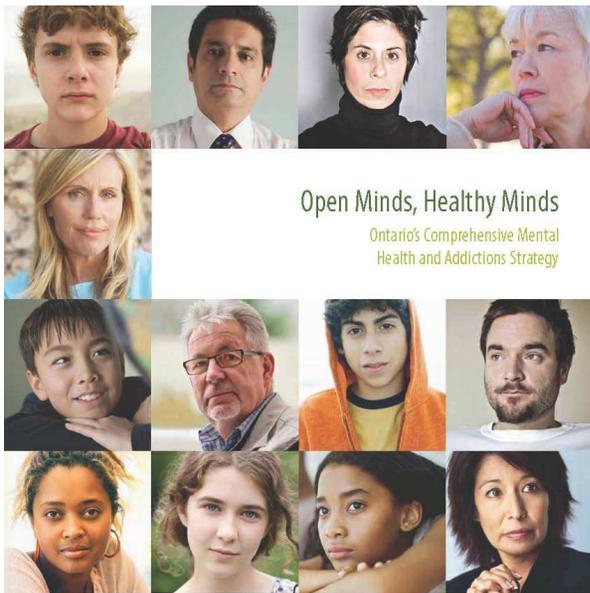

(Lunsky ed 2013)

Linking Citizenship and Immigration Canada data to
health data at ICES

Linked data for policy:

Ontario government 10-year commitment to Mental Health

2011 Ontario announced funding to support a Comprehensive Mental Health and Addictions Strategy to create a more responsive and integrated system in Ontario

Phase 1: Children and Youth Strategy Partners

- Ministry of Children and Youth Services
- Ministry of Education
- Ministry of Training, Colleges and Universities
- Ministry of Health and Long-Term Care

ICES' role to create a baseline scorecard and supporting data collection

Proposed : Child and Youth Linkable Data Repository

DATA PARTNERS

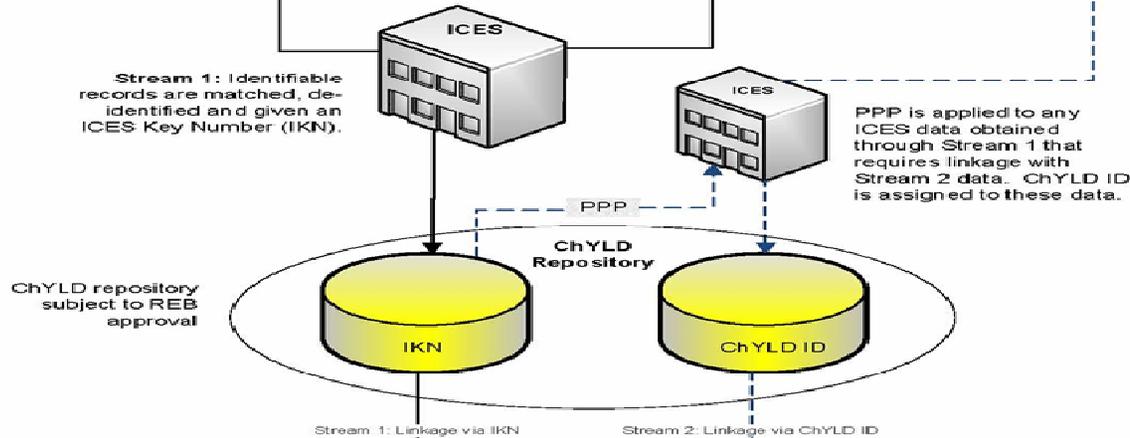

Examples:
Hospitals
Registries
Medical Clinics
Public Health Units
Some Community Mental Health Agencies
MOHLTC
Etc.

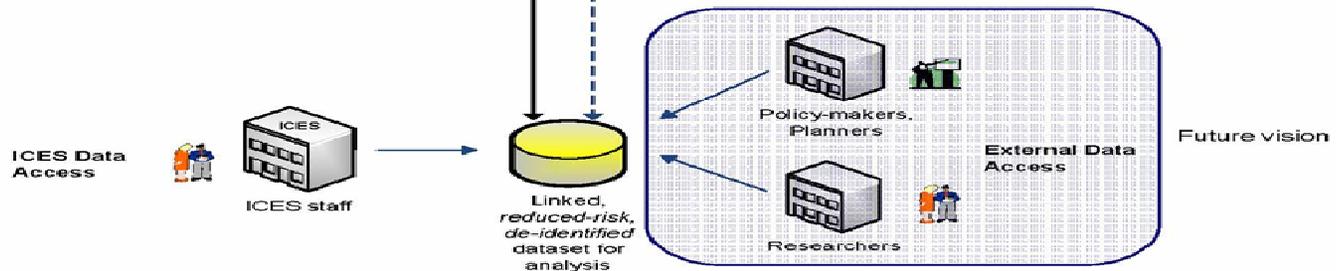

Examples:
Youth Justice Centers
Children's Treatment Centres
Some Community Mental Health Agencies
MCYS, MCSS, MCS
Etc.

Examples:
Education
Children's Aids Societies
Etc.

DATA INTEGRATION

DATA ACCESS

Challenges of linking multi-sector data in Ontario

- Data flows have different origins and purposes for collection – managing clients, managing agencies - funding, managing systems
- Data records from different sources governed under different statutes need to be linkable with one unique identifier
- Some cases, linkable data doesn't exist – not at person-level
- ICES' prescribed entity status does not apply to statutes outside health
 - Legislative challenges identified
- Data partners are wary of sharing data, despite their understanding that data integration would be useful

What to do next?

New Partners:

- Integrating multi-sector data is now a commitment of the Ontario government
- Inter Ministerial working group to understand issues – ICES key SME
- Partnership with MCSS for individual-level data underway
- MOU signed with MEDU for school-level data; Kinark mental health agency

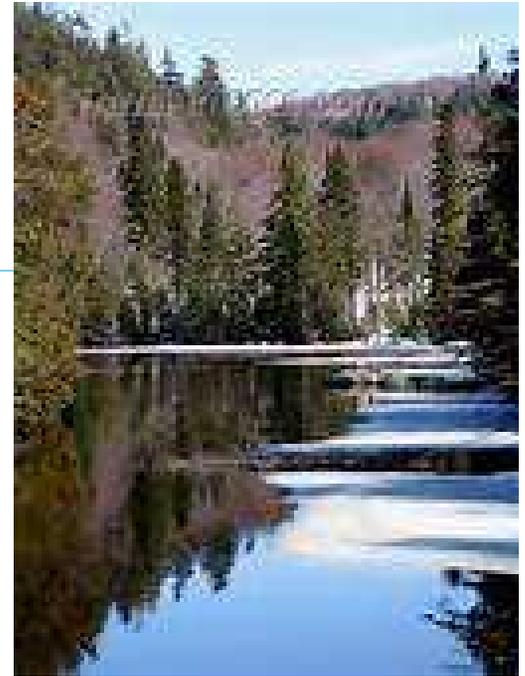

Data integration/technology:

- New models of data matching/linkage of individual-level data records - encryption
- Maybe other alternative models for data storage, integration, access

Data governance:

- Leverage existing legislative options
- New legislative options
- New data access and permission frameworks

Thank you
